

HAGEN & GOEBEL

Werkzeugmaschinen GmbH

About us:

The Company Hagen & Goebel of Soest, develops, designs and produces components and machines for chip generating metalworking. The particular specialities are machines and units for tapping and machining units for metal cutting with rotating tools. In addition, from the basis of decades of experience of special purpose machine tool manufacture, Hagen & Goebel offer an extensive programme of clamping techniques.

Established customers include numerous well known suppliers to the automobile industry, metal product manufacturers, foundries and the electro-industry at home and abroad.

The Hagen & Goebel Company was founded in 1933 originally as a supplier to the Hagen Battery AG in Soest. In the 30's the founder incorporated the threading machine production programme of the Brothers Thiel Co. of Ruhla in Thuringen and these products were consistently developed by Hagen & Goebel.

After the war the Company continued with these products as their standard programme with many special purpose machine solutions being developed and built for various types of machining operations.

An additional new new impulse was received by Hagen & Goebel through their takeover by the AXA Company (Schoeppingen / Westf.) in the late 80's and while retaining their independence the spectrum of products were continually extended.

In close contact with the Soest Machine Engineering division of the University / Polytechnic Paderborne pioneering developments have been made particularly in the area of high speed thread machining, have been made. The most modern control techniques were, as a consequence, integrated into Hagen & Goebel product development.

In mid 1991 the administration and operations facility were moved to the industrial area of Soest South-East. and have continued to this time to be repeatedly expanded. The company site is only approx. 25% developed today so that considerable future expansion is possible.

In the autumn of 2000 the  product programme - CNC Keyway milling machines and also CNC production boring and milling machines of the Company A and W Busch in Gevelsberg were taken over by Hagen & Goebel and produced as independent product lines in Soest, supervised by experienced staff and incorporate the delivery of spares and the service of the machine tools delivered by the Busch company.

To ensure the independent production of these programmes, an enlarged building came into operation at the turn of the year 2000/2001.

With the growing popularity and acceptance of the Hagen & Goebel and "Busch" product programmes by customers, the staff is being continually increased.

Your contacts:

Executives: Dipl.Ing. A. Kappelhoff
 Dipl.Ing H. Saar

Sales: Mr. F. Edel Sales Manager, Standard products
 Tapping machines, Pneumatic cylinders
 Toolholders (Tool posts)
 Technical Sales
 Spindle and Slide units
 Special solutions

 Mr. B. Sprenger Sales of  range of Machine Tools

Design: Mr. U. Hinzmann Threading machines and units
 Special machines

 Mr. G. Lehr Machining units, clamping techniques
 Special machines

Works Manager: Mr. B. Soegtrop

You can reach us on Monday to Friday from 8.00 to 17.00 at:
